Technical & Financial Clarifications

Hi Team,

Following up on our call yesterday, here are the answers to the technical and commercial questions your team raised regarding the document extraction project:

1. Document Types & Formats

- We primarily receive **PDF invoices**, **DOCX scope documents**, and **EML email files**. The parser needs to handle all three formats smoothly.

2. Database Integration

- Our backend runs on **PostgreSQL**. The final approved JSON payload from the review interface must be posted directly to our PostgreSQL server via a REST API endpoint.

3. Budget Constraints & Billing

- Our hard budget ceiling for this initial build is **\$35,000 USD**.
- We prefer a blended billable rate between **\$120 and \$140 per hour**.

4. Target Timeline & Milestones

- We need this live in **6 weeks**. We prefer a 3-milestone payment structure tied to functional deliverables (Ingestion module -> Extraction & Review UI -> Final Deployment).

Please incorporate these parameters into your formal Statement of Work and pricing breakdown.

Best,
Dave
